

PULLING UP BY YOUR BOOTSTRAP

Objectives: Create a responsive HTML page with Bootstrap

Task: Redesign your personal website using bootstrap

What will the application do?

Starting from scratch, redesign your personal website using Bootstrap to make it mobile responsive

Build Specifications:

- **All pages should be mobile responsive.**
- Create at least 3 pages: home, about, and portfolio
- Your homepage should include 2-4 sections about you. For example: the first section focuses on blogging, the second focuses on developing, and the third focuses on your hometown.
 - Must include at least one bootstrap style on each section
- Include a header with navigation as well as a footer for all pages.
 - Must include at least one bootstrap style on each
- Include links like LinkedIn and other professional social media.
 - Must include at least one bootstrap style on each. Cards are good here
- Your Portfolio page should include a description and link to projects you want to highlight.
 - Must include at least one bootstrap style on each
- Your About page should include your bio and a way for visitors/employers to contact you.
 - Must include at least one bootstrap style

Tips:

- It is easier to design your website to look good on phone then adjusting it to look good on desktop.
- Google Chrome and Firefox include mobile views. To access, click f12 then look for the button that looks like a phone in front of a tablet. Click that to toggle between Mobile and Desktop

Extra Challenges:

- Go to [GetBootstrap.com](https://getbootstrap.com) and try out other built in options. Go wild.
